

SPECIFICATION DATA

TRAMCO
PUMP COMPANY

TRAMCO Series 8750

Break Tank Systems

TRAMCO's Series 8750 Break Tank Systems are designed and manufactured to provide prevention of back flow.

Applications

Steam Boilers (w/chemical treatment or over 15 PSI)
Chilled Water Systems
Toxic Fluid Systems
Refrigerant Condensers
Secondary Water Systems
Hydronic Heating Systems

Features

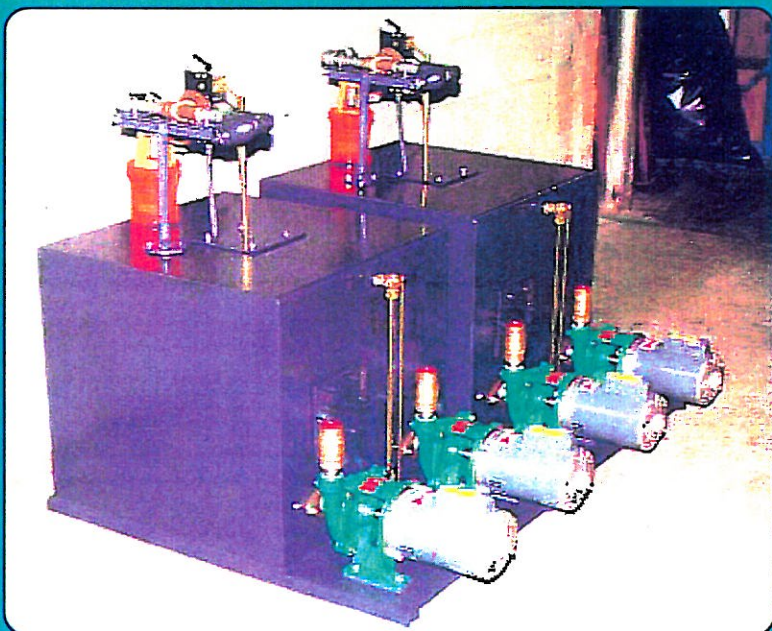

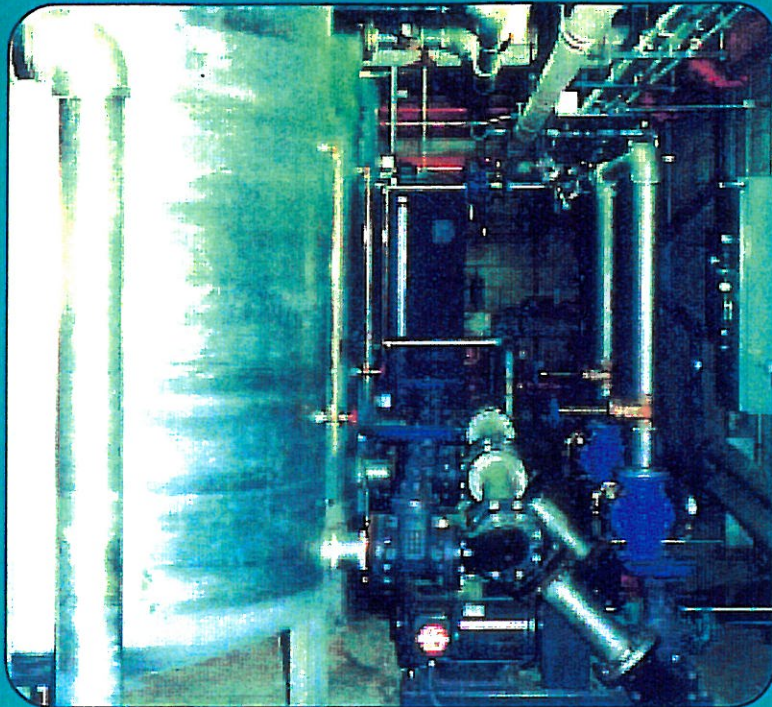

Fully automatic operation with the tank, water make-up valve, air gap fitting, overflow connection and pump all sized for required design condition.

Construction

Break tank available in plastic, steel or galvanized steel having a sight glass and necessary openings. Pumps are available in all iron, cast iron bronze fitted or stainless steel with various mechanical seals. Single and three phase motors are available starting at 1/3HP.

Accessories

UL Labeled control panels in several different enclosures. Hydropneumatic tanks and pressure reducing valves provide constant flow and pressure to water fixtures or mechanical equipment.
